AI Hardware.
Built for Real Life.

DES helps brands turn AI ideas into market-ready hardware.

Direction → Development → Delivery

AI Business Badge · Illustrative industrial design concept

An AI Hardware Solution Partner

We connect product definition, technical solution partners and manufacturing execution for international brands. Our current focus is conversation intelligence and AI vision.

AI Wearables / AI Vision / AI Communication

Global markets, including the UK, Europe and UAE/GCC. Related device directions include AI Recorder and AI Translation Device. AI Glasses remain an exploratory direction.

AI Business Badge

Capture conversations. Turn them into actions.

Illustrative scenario. Not a deployed customer project.

Use cases

Sales meetings, professional services and trade-show conversations. Start with a clearly defined user workflow and participant awareness.

Product experience

Intentional capture → transcription → summary → actions → reviewable follow-up. Explore language priorities and CRM export around the customer’s workflow.

Platform focus

Physical record / highlight controls, low-noise microphones, visible status, local storage and reliable synchronization. Validate SDK access, data handling and OTA updates.

Development route: assess an existing recorder platform, scope the AI / app layer, test a prototype and agree pilot acceptance criteria.

Explore AI Business Badge

AI Vision Camera

Understand events. Make the next action clearer.

Illustrative scenario. Not a deployed customer project.

Use cases

Property, hospitality, retail and connected-home environments. Define one useful event before expanding the feature set.

Product experience

Explore person / pet / vehicle detection, event descriptions, searchable event history and relevant alerts. Balance usefulness with privacy and data control.

Platform focus

An accessible IPC platform with SDK / stream access, configurable storage and OTA support. Assess edge detection and cloud interpretation against latency and operating cost.

Development route: select a platform, integrate the event experience, validate image quality and alert accuracy, then plan a field pilot.

Explore AI Vision Camera

A practical route from idea to product.

Clear scope. Visible decisions. Agreed responsibilities.

Direction	Define the user, use case, launch market, feature scope and target economics. Deliverable: a focused product brief and decision criteria.
Development	Assess mature platforms and partners; coordinate customization, AI / app integration and prototype evaluation. Deliverable: development scope, sample findings and open decisions.
Delivery	Align pilot approval, manufacturing readiness, quality checkpoints and delivery milestones. Deliverable: a scoped execution plan with named responsibilities.

How responsibilities are shared

DES leads definition and coordination. Selected partners provide scoped engineering and manufacturing. Your team agrees brand priorities, approvals and launch requirements.

Let’s start with your use case.

Share your device direction, target users, markets, current stage and indicative timing. We will use that brief to frame the next product conversation.
